## *Insight*

We have upgraded the Insight program to allow it to be more flexible with the multiple browsers and devices that are on the market today and will be in the future. We wrote the new code using Google's Angular. By using Angular the system will now be faster, more nimble and save you time by lessening the amount of clicks to get to the information that is important to you.

One of the major changes is the ability to view the Management Summary Report on a daily basis. Beginning with the day of the conversion you will be able to go back to any single day and see the End of Day for that specific day. Currently you can see today's up to the minute information, yesterday's EOD and two plus years of End of Month's.

The new program allows you to go to the Bank Deposit report and with a single click collapse every day and see each day's sub-totals and the monthly total. This also applies to the Cash Receipts Cash, Cash Receipts Accrual and Sales Journal.

You now have the ability to sort by any of the fields in the report. In

the Accounts Receivable report you can sort by those customers 31-60 days late or in Operational Variance report you can sort by the type of variance or the user. These are just a couple examples of the many options.

We have also added a search field to most reports. Now instead of scrolling through a report looking for one customer you can type in their name and it will give you all the information pertaining to that customer. If you are not sure of the name but have a dollar amount or other data you can put that in and it will find all matching information.

The upgrades to the Batch Download include a new file format for faster downloads and the ability to edit and save multiple batch files. You can now individualize a query for each person who needs access or each unique situation. You will no longer need to make changes each time you want different information or access to different sites.

When setting up a Site Exceptions to Business Rules you will be able to see the Company default rules on the same page. Also if the site rules are different than the Company rules they will be highlighted.

In the Overview we had added a Rent Raise History report.

Previously the system allowed you to enter a tax to three decimal places (6.255) but only displayed two places on reports (6.25). The system will now display to three decimal places on the reports.

I hope these improvements allow you to get the most out of the Insight software and make it easier for you to manage your facilities. There are more improvements than I have room to list here. If you have any questions on how something works in Insight please check the newly added Help section at the top of the screen or contact our support department at 877-591-0455.

In an effort to provide our customers with the best performance and security possible, this update will utilize the latest application architecture / protocols from Microsoft. This architecture is called .Net Framework. If your operating system (Windows 7-10) is configured for automatic updates you should already have this pre-requisite installed, and no further action will be necessary. If you get an error updating Space Control Onsite, you can either attempt to install the .Net Framework yourself at the URL provided below, or feel free to contact our support department at 877-591-0455.

.Net Framework 4.7.1:

Please stop by our booth at the Self Storage Association Fall Conference and Trade show booth 729. We look forward to showing you our new suite of programs for the cloud and to discussing all its new features with you. Have a wonderful 4th of July.
